NOTE: The above combinations are examples. Actual customer usage and file sizes may vary.

THESE THINGS MAY AFFECT USAGE:
Full-length movie download files are HUGE!

- One movie download can be as big as **3 Gigabytes**, which is more than one hundred 25 Megabyte files!
- Downloading or streaming full-length movies from web sites like Netflix or Blockbuster will cause customers to reach their usage thresholds **QUICKLY!**

Streaming Audio & Video

Continuous **streaming audio and video** will cause customers to reach their usage thresholds VERY FAST! It is NOT recommended.

Viruses and Malware

These can cause a PC to run slower, which can cause slow Internet speed or unexpected data usage. WildBlue recommends that all customers maintain up-to-date anti-virus software on their PCs.

Wireless Routers

If you have a wireless router connected to your WildBlue service, you must turn on its wireless security settings. If you don't, it's possible for other people to access the wireless signal and use your WildBlue connection without your knowledge.

Peer-to-Peer File Sharing

Peer-to-peer (P2P) file sharing applications create a constant stream of usage both up and down. Because WildBlue is an "always-on" service, peer-to-peer traffic can be generated 24 hours a day. There are dozens of peer-to-peer applications, including Kazaa, µTorrent, BitTorrent, LimeWire, Gnutella, Morpheus and eDonkey.

HOW TO KEEP TRACK OF USAGE:

Your usage data is available via the "Manage My Account" web page, accessible via www.wildblue.net.

Average File Sizes

FILE TYPE	FILE SIZE IN MEGABYTES (MB)
Web Page View	0.8
Digital Photo	1
Video Clip <i>(Example: YouTube)</i>	10
Song/MP3 <i>(Example: iTunes, Rhapsody)</i>	5
File download <i>(Example: Email attachments)</i>	20
Software updates <i>(Example: Windows, security)</i>	20-200
Full-length movie downloads	1,000-3,000
